

Monetise your spare capacity

CUDO Compute offers a new route to market for bare metal service providers without sales and marketing overheads.

Uncover new revenue streams

Other bare metal service providers have increased their revenue streams by selling spare capacity on CUDO Compute Marketplace.

Warsaw Poland

An international bare metal provider tried CUDO Compute within their **Warsaw** facility in Poland. They received a **revenue of \$6,323** from just **five servers** after platform fees. Selling these servers as bare metal through their **own service portal** would ordinarily bring them **only \$5,000**.

Santa Clara United States

A provider from **Santa Clara** onboarded **ten bare metal servers** and received a **revenue of \$4,000**. Selling all ten servers via their portal would result in the same revenue. However, with CUDO Compute, the servers were at **50% utilisation**, and there wasn't any marketing, sales or operational overhead.

A cloud without compromise means everyone wins

Profitable

Monitise idle hardware through a global marketplace by selling your spare capacity.

Efficient

Go to market rapidly, without sales, marketing and operational overheads.

Sustainable

Putting wasted capacity to work benefits the planet and your bottom line.

Want to benefit from monetising your spare capacity on CUDO Compute?

With increasing market demand for high-performance computing, more and more GPU and bare metal providers are joining our global network of suppliers, making CUDO Compute the go-to platform for HPC and general CPU compute.
